

Rip and Tip Screening Station

Typical Use

- Check Screening of ingredients.
- Pharmaceutical powders.
- Wet and Dry Applications.
- In-line mixing/blending systems
- In-line FIBC/IBC discharge systems
- In-line vacuum transfer systems

Benefits

- Product quality maintained
- Low maintenance and running costs
- Easy cleaning design
- No tool for dismantling
- IP67 dust and hose proof design
- Noise levels below 70 dBA

Options

- Available in 600mm to 1100mm dia screening areas
- Rare earth magnets within product flow
- Add-on dust extraction systems
- Mobile stands
- Ultra-Sonic mesh de-blinding
- ATEX designs

GV2 Rip & Tip
Check Screener

The Gough Rip and Tip station has been specially designed for low-level bag emptying and check screening of raw materials whilst effectively removing dust particles escaping into the work environment.

Compact sieve unit ensures the quality of your ingredients by removing oversize contaminations and tramp materials.

The system has been designed to meet the very stringent engineering finishes and design specifications required by the food, pharmaceutical and allied industries.
